SUMMARY

B.Tech CSE student with interests in Machine Learning and Full Stack Development. Experienced in building practical projects. Skilled in C++, Python, Flask, SQL with a focus on combining problem solving, algorithms, and user-friendly design to create impactful solutions.

TECHNICAL SKILLS

- Programming Languages:** Python, JavaScript, Java, C++, SQL
- Frontend Development:** HTML5, CSS, jQuery
- Backend Development:** Node.js, Express.js, Flask
- Databases & Systems:** MySQL, MongoDB, Database Management Systems
- Development Tools:** Git, GitHub, Docker, VS Code, Postman, Google Colab
- Emerging Technologies:** Machine Learning, Scikit-learn, Pandas, NumPy, AI Applications

EDUCATION

VIT Bhopal University

Bachelor of Technology Computer Science Engineering

Bhopal, Madhya Pradesh

Aug 2023 – May 2027

- Relevant Coursework:** Computer Science Fundamentals, Database Management Systems, Web Development, Software Engineering, Algorithms, Systems Design

PROFESSIONAL EXPERIENCE

COSMIC365

Technology Developer Intern

Remote

Feb 2024 – Aug 2024

- Systems Architecture & API Development:** Contributed to systems architecture design and implemented RESTful APIs for cross-functional communication, focusing on performance optimization and secure coding practices.
- Database Management & Optimization:** Applied problem-solving skills to optimize database performance using MySQL, implementing efficient CRUD operations and query optimization techniques.
- Cross-Functional Collaboration:** Collaborated with cross-functional teams including product managers and engineers in code reviews, unit testing, and requirement discussions to align technology with business objectives.

TECHNICAL PROJECTS

Machine Learning Healthcare System

Disease Prediction AI Application | Python, Scikit-learn, Pandas, NumPy, Flask

- Machine Learning Implementation:** Developed comprehensive AI application using multiple supervised learning algorithms including Random Forest, SVM, and Logistic Regression, achieving high accuracy in medical condition prediction through advanced data analysis.
- Algorithm Optimization:** Applied problem-solving skills to evaluate and compare performance of various algorithms (KNN, Decision Tree, Naive Bayes) using cross-validation techniques, optimizing model selection based on precision and recall metrics.
- Full-Stack Integration:** Built scalable web application using Flask framework with intuitive user interface, enabling real-time data processing and prediction delivery for healthcare professionals with confidence scoring systems.

Dynamic Blog Web Application

Sid Blogs Content Management System | HTML5, CSS3, EJS, Node.js, Express.js

- Scalable Architecture Design:** Designed and developed lightweight content management system using Node.js and Express.js architecture, enabling efficient post management and retrieval with optimized infrastructure complexity.
- Template-Based Solutions:** Implemented EJS templating engine for dynamic content rendering, enhancing user interface responsiveness and providing seamless user experience across all content management features.
- Performance Streamlining:** Applied performance optimization techniques in database-free application architecture, reducing infrastructure overhead while maintaining high-quality software delivery and system reliability.

CERTIFICATIONS & ACHIEVEMENTS

- Introduction to Machine Learning - NPTEL Certification:** Demonstrated strong foundation in AI/ML concepts, algorithms, and practical applications in modern software development and emerging technologies.
